## **Objective**

---

As a fresher in web development, my objective is to secure a position in an IT company where I can apply my knowledge and skills to contribute to the development of dynamic and user-friendly websites. I am eager to learn, grow, and collaborate with a team of professionals while delivering impactful web solutions.

## **Skills**

---

Expertise: HTML | CSS | Bootstrap | Tailwind | JavaScript | ES6 | React

Comfortable: Firebase | ExpressJS | MongoDB | RestAPI | JWT

Familiar: Node | NextJS

Tools: VS Code | Git | Figma | Vercel | Netlify

## **Projects**

---

### **1. Chef recipe hunter project (It's a react firebase based website)**

- This website contains different chef's recipes of American Cuisine, where one can find different recipes based on specific chef's.
- One can see the details of any chef recipes according to their choice and one can add any dish to their favorite. It has a login, registration page. A private route and firebase authentication used in this project.
- This website is fully responsive for mobile, laptop and desktop. A back end server is used for this project and all data is integrated from the server.

[Live Site](#) | [GitHub client](#) | [GitHub Server Site](#)

**Technology:** Bootstrap, React bootstrap, React, React router, Firebase, ExpressJs., React counter, React leaflet etc.

### **2. Toy market place projects (It's a MEARN stack based website)**

- This is a market place where seller can add their products with details information of their toys. They can also see their toys explicitly as well as searching toys by name in all toys route.
- All the data used in this projects is integrated from database and one can able to update and delete toys from their own collections. One can shop toys by specific category.
- This is a fully responsive website and private routing is also implemented here.
